

#StayWell 2022: a Teen Vaccine QI Learning Collaborative

Collaborative Purpose

Alabama Child Health Improvement Alliance (ACHIA) Collaborative participants improve outcomes in a specific content area – in this case teen vaccine completion by 13 years of age – as well as develop quality improvement (QI) skills to sustain gains long after the collaborative concludes. ACHIA collaboratives emphasize the “Local” nature of improvement by connecting with local content experts, local community resources – and importantly – by providing a forum for practices to learn from parents and patients as well as Alabama-based practice peers.

The #StayWell 2022 Teen Vaccine Challenge

Global Aim

- Teens are fully vaccinated by 13 years of age.

Specific Aims for All Practices

- Increase HPV vaccine completion for 9- to 12- year olds by 5% over practice baseline by August 2022.
- Increase Tdap and MenACWY vaccine completion for 11-12 year olds by 5% over practice baseline by August 2022.
